

InventoryAssuranceSM

Assuring the Reliability of Your Spare Parts Inventory

InventoryAssurance Benefits

- Increases the integrity of spare parts inventory
- Minimizes costly downtime of production
- Critical firmware updates
- High quality remanufacturing service
- One year remanufacturing warranty
- Improved plant performance

To begin your InventoryAssurance program, gather a minimum of five (5) suspect units and contact your local Allen-Bradley® distributor. Once returned, you will have confidence in the integrity of your spares when the need arise.

For more information, contact your local Rockwell Automation sales office or authorized Allen-Bradley distributor.

At Rockwell Automation we understand the criticality of keeping your machines up and running, that means reliable spare parts when you take them off the storeroom shelves. Rockwell Automation InventoryAssurance provides a comprehensive testing service for your suspect spare parts inventory. InventoryAssurance helps you avoid costly downtime by insuring the integrity of repairable Rockwell Automation spare parts. This service targets your suspect spares inventory in need of validation due to the following:

- Broken sealed containers in storeroom
- Environmental exposure (temperature, humidity, vibration, electro static, etc.)
- Extended shelf life (component life)
- Suspect inventory (repair work performed by unauthorized companies)
This cost effective service allows you to send repairable Rockwell Automation products to our certified remanufacturing facilities for inspection and comprehensive pass/fail testing.
- Units found to possess the most recent firmware updates and pass all testing will be repackaged and returned with a one (1) year warranty.
- Any units requiring firmware update or failing any test will be remanufactured to factory specification with any testing fees applied to the remanufacture.
